

ELEC3609/9609 - Week 12

Lab

A2 Technical Interview

Each group will participate in a technical interview conducted by the tutors, focusing on A2 your source code, system architecture, and development process.

Task Description

This lab session is a **technical interview** to assess your understanding of your implementation (Assignment 2). Tutors will visit each group and ask questions about:

- Your **project architecture** and design choices.
- **Code structure** and key implementation decisions.
- The content in your submitted **assignment report**.
- Any technical challenges or trade-offs encountered.

Please be prepared to **explain, justify, and walk through** parts of your system using your submitted materials from **Week 11** (i.e., source code and report).

Presentation Order and Time Allocation

Groups will be interviewed in **ascending group number order** (e.g., Group 1 → Group 2 → Group 3...).

! INFO

If your group needs to be interviewed earlier due to urgent circumstances, please notify the tutors **before the lab begins**.

Each group will be allocated **10 minutes total** for the interview.

**TIP**

You are expected to spend:

- ~5 minutes introducing your architecture and key implementation points.
- ~5 minutes responding to questions tailored to your project.

During Interview

- Groups will not present to the whole lab. Tutors will **visit your table** and conduct the interview **individually**.
- Ensure your group has:
 - A **running version of your project** (local only).
 - Your **assignment report** and **source code** ready to access.
- Be respectful and quiet while other groups are being interviewed.
- All group members must attend. Everyone should be ready to answer.

Reminder

This interview contributes to your final project mark and focuses on your **technical understanding and individual contributions**. To prepare:

- **Practice explaining** your system architecture and logic.
- Ensure your app runs correctly and key features are accessible.
- Use your report and submitted codebase to support your answers.
