

ELEC3609/9609 - Week 5 Lab

A1 Milestone Presentation

Each group will give a short pitch of their proposed project idea to the class and tutors.

Task Description

In this milestone presentation, each group will deliver a **5-minute elevator pitch** introducing the **core concept and innovation** of their proposed website project.

The goal is to impress the audience with the **merits and potential** of your future web application. Focus only on the **core value** of the project, what makes it interesting, unique, and valuable to your target users.

After each pitch, there will be a **brief Q&A session** with tutors and possibly other teams, offering valuable feedback and ideas for improving your project.

Presentation Order and Time Allocation

Groups will present in **ascending group number order** (e.g., Group 1 → Group 2 → Group 3...).

INFO

Please be ready two groups ahead of your scheduled turn. If your group needs to present **earlier due to urgent circumstances**, please notify the tutors **before the lab begins**.

Each group has **5 minutes** for the presentation, followed by a short Q&A.

WARNING

There is a strict time limit. Any group will be stopped when time is up. The timer will be enforced to ensure fairness.

During Presentation

- Be respectful and quiet during other groups' presentations.
- All group members must attend.
- Not all members need to speak, but everyone should be ready to answer questions.
- Absence or failure to reasonably answer questions may result in mark penalties.

Reminder

This presentation contributes to your final assignment mark and will be assessed based on how effectively you **communicate the value and goals** of your proposed application, particularly **how your design addresses the needs of your users**.

Please **practice in advance**. You are allowed to use a script, but **reading directly from it will significantly reduce your mark**.

In addition, your group must submit the following on **Canvas this week** for A1 milestone:

- Your **group contract**
- Your **presentation slide**
- Your **MVP list**
